000000

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC channel proteins and polynucleotides encoding such proteins. Sequences of the invention are useful in therapeutic, diagnostic and pharmacogenomic capplications. They are useful for the identification of protein coding sequences, for mapping a unique gene to a particular chromosome, as additional DNA markers for restriction fragment length polymorphism (RFLP) analysis and in forensic biology, for screening libraries, considering clones, preparing templates for cloning and sequencing, as the proteins of genetic material from patients who have a particular collections of genetic material from patients who have a particular condition, to identify mutations associated with a particular condition probes, in microarrays or other assay formats, to screen considered and also as a diagnostic or prognostic assay. NHPs are useful for the detection of mutant human proteins or inappropriately expressed compounds for the diagnosis of disease, for the generation of antibodies, for screening for drugs effective in the treatment of symptomatic or protein in the body, for identification of other cellular gene products compounds that can be used as pharmaceutical agents in the therapeutic creatment of mental, biological or medical disorders and diseases. The present sequence is a cDNA encoding human ion channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 1420;

CC polymerase chain reaction (PPR) primers, oligomers, and for chromosome CC polymerase chain reaction (PPR) primers, oligomers, and for chromosome CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites and polypuclectide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC diagnostics, forensics, gene mapping, identification of mutations CC composible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostic coding sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC The sequence data for this pattent did not appear in the printed consectification, but was obtained in electronic format directly from WIPO CC at fitp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     31-MAR-2000;

New potassium channel family member polypeptide and polynucleotide, useful for diagnosing, treating viral diseases, neurological, cardicellular proliferative or differentiative, bone, immune, liver and metabolic disorders

Claim 1; Page 135-136; 158pp; English

CC transport protein domain and a core membrane region including 6
Ctransmembrane domains. The invention provides human potassium
CC channel 52906, 33408 and 12189 nucleic acids and proteins, as well
CC as antisense nucleic acid molecules, recombinant expression vectors,
host cells, transgenic animals, fusion proteins, antigenic peptides
CC and antibodies. Also claimed are: a method for detecting the
presence of a 52906, 33408 or 12189 nucleic acid; a method for
CC modulating the activity of a 52906, 33408 or 12189 polypeptide using
CC acompound that binds the polypeptide; a method for identifying a
CC compound which modulates the activity of the polypeptide; a method
CC of treating or preventing an ion flux-related disorder using an
CC agent that modulates the activity or expression of a 52906 or
CC 12189 polypeptide or nucleic acid, especially a peptide,
CC phosphopeptide, small molecule, antibody, antisense molecule,
CC ribozyme, a triple helix molecule, or a 52906 or
CC ribozyme, a triple helix molecule, or 35200 nucleic
CC associated disorders, such as neurological disorders and central
CC associated disorders such as cognitive and neurodegenerative
CC dementia, Huntington's disease, Parkinson's disease, senile
CC dementia, Huntington's disease, autonomic function disorders such as such as and sleen'ders, auch and seneropsychiatric disorders such as cognitive and neurodegenerative and central and sleen'ders, auch and seneropsychiatric disorders such as cognitive and neurodegenerative and central and sleen'ders, auch and companies function disorders such as such as cognitive and neurodegenerative and central and sleen'ders, auch and companies function disorders such as companies and sleen'ders. hypertension and sleep disorders, neuropsychiatric disorders swas depression, schizophrenia, mania, anxiety disorders or phobi disorders, learning or memory disorders, amnesia or age-related memory loss, attention deficit disorder, obsessive-compulsive disorder, migraine or obesity; cardiac-related disorders such as The present sequence is that of a partial cDNA for human 12189 (see ABB76166), a novel potassium channel family member. 1218 contains a potassium channel tetramerisation domain, an ion / loss, arrender, migraine 12189 such as

```
cc arteriosclerosis, ischaemia reperfusion injury, restenosis, arterial cc infarammation, tachycardia, congestive heart failure, myocardial cc infarction and arrhythmia. The polypeptides and nucleic acids are calso useful as diagnostic targets and therapeutic agents for: cc e.g. haematopoietic neoplastic disorders, carcinoma and sarcoma; cd disorders associated with bone metabolism such as osteoprosis, crickets, osteopenia, cirrhosis, hyperparathyroidism, idiopathic cd disorders associated with bone metabolism such as osteoprosis, cc hypercalcaemia; immune disorders such as autoimmune disorders, cd diabetes mellitus, arthritis, including rheumatoid arthritis, constead and psoriatic arthritis, multiple sclerosis, cc myasthenia gravis, suntoimmune thyroiditis, uncommandid arthritis, consisted and provisis, syndrome, dermatitis, crohn's disease, asthma, consisted asthma, conjunctivitis, aplastic anaemia, Grave's disease, allergic asthma, conjunctivitis, aplastic anaemia, Grave's disease, contronic active hepatitis, autoimmune uveitis, scleroderma; liver cdisorders including storage disorders such as Gaucher's disease, consisted asthma, cronic active hepatitis, autoimmune uveitis, scleroderma; liver cdisorders; viral disease, haemochromatosis and peroxisomal cc disorders; viral disease, pain; or metabolic disorders such as cc obesity, anorexia nervosa, cachexia, lipid disorders and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Selective antagoni increase insulin release and thereby reduce hyperglycaemia associated with non-insulin-dependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New voltage-gated potassium channel gene - used to identify material(s) which can increase insulin release e.g. for treating non-insulin dependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        10-AUG-1994;
04-MAR-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The DNA encodes a mouse Kv1.7, which is a Shaker-related voltage-
gated potassium channel. It may be used in drug screening for
identification of therapeutics which modulate the channel and,
therefore, modulate insulin secretion. Selective antagonists
                                                                                                                      448

                                                                                                                                                      hyperactivity disorder, depression, anxiety, stroke, migraine, ischaemia or neurodegenerative disease (e.g. macular degeneration, Alzheimer's disease, glaucoma, or Parkinson's disease). The compounds that modulate ion channels can be used for treating of cardiovascular diseases (e.g. congestive heart failure, arrhythmia, high blood pressure or restenosis), metabolic diseases and disorders (e.g. diabetes or obesity), hormonal disorders (e.g. polycystic ovarian syndrome or alopecia) and proliferation diseases and cancers. The ion channels are also useful as targets for discovering ligands or drugs to treat many diverse disorders and defects. The ion-x sequences and their modulators may also be used in diagnostic assays for such diseases or conditions. Ion-x nucleic acids are used in gene therapy. The present sequence is a DNA encoding human ion channel designated as ion-166.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; ion channel; neurological disorder; psychiatric disorder; schizophrenia; attention deficit hyperactivity disorder; depression; proliferation disease; migraine; ischaemia; neurodegenerative disease; macular degeneration; Alzheimer's disease; congestive heart failure; glaucoma; Parkinson's disease; cardiovascular disease; arrhythmia; glaucoma; Parkinson's disease; cardiovascular disease; arrhythmia;
                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to ion channel polypeptides designated as ion-x (where x is 157-175) and their corresponding nucleic acids. The ion-x sequences and their modulators are useful for the treatment of human diseases and conditions such as neurological or psychiatric disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                treating or diagnosing neurological diseases, e.g. depression, anxiety, Parkinson's disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic live tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2867
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in liver tissue sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      310

rne present invention describes a method (M1) for screening for an CC anti-neoplastic agent. The method involves exposing cells to a chemical CC agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664 CC to ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC anti-neoplastic agent, and can be used for screening CC an anti-neoplastic agent, and can be used for producing a product which CC is the data collected with respect to the anti-neoplastic agent and can be used for producing a product which CC result of M1, and the data is sufficient to convey the chemical CC structure and/or properties of the agent. M1 can be used in the CC creatment of cancer such as colon, breast, stomach, lung, thyroid, CC adenorarraina, kidney, prostate or pancreation cancer.

                                                                                                                                                              This sequence represents a novel method for identifying inhibitors or activators (A) of a eukaryotic potassium channel (KC) by applying a test compound to a mutant Saccharomyces cerevisiae cell in which: (i) the three endogenous KC (TRK1, TRK2 and TOK1) are not expressed; but (ii) a eukaryotic KC is expressed heterologously, where the effect of the compound on the eukaryotic KC is then determined. The method is used to identify inhibitors or activators (A) of a eukaryotic potassium channel. (A) are potentially useful as pharmaceuticals. The method is easily automated for parallel processing of many samples, using either different concentrations of test compounds and/or different levels of heterologous gene expression. It allows identification of compounds that inhibit human KC selectively. This sequence represents the human KV1.5 encoding DNA described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1813

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression levels or expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving cruptesent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

                                                 cc This invention describes a novel method for determining the degree of cc methylation of a particular cytosine in a motif 5'-CpG-3', present in a cg genomic sample of DNA. The sample is treated chemically to convert cc cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one cc and the degree of hybridiseation to both classes is determined from the CL label on the amplicon. From the ratio of labels hybridised to the two cc classes of oligomers, the degree of methylation is calculated. The method CC is used: (i) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory cof the central nervous, cardiovascular, gastrointestinal and respiratory csystems etc., particularly by detecting mutations or single nucleotide CC systems etc., particularly by detecting mutations or feell or tissue ctypes and for investigating cell differentiation. The method allows the method for determining the degree of cytosine methylation described in cc methylation status of many C residues to be determined simultaneously.

CC ABD(1340-ABD(34121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in cc the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis;

                                                                                                                                                                                                                                                                                CC This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of CC is used: (i) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide CC polymorphisms (SNP's), and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

CC method for determining the degree of cytosine methylation described in the disclosure of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, of oligonuclotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of CC is used: (1) for diagnosis and/or prognosis of side effects of CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders CC systems etc., particularly by detecting mutations or single nucleotide CC types and for investigating cell differentiation. The method allows the CC methylation status of many C residues to be determined simultaneously.

AB013410-AB054121 represent genomic DNA sequences used to illustrate the CC method for determining the degree of cytosine methylation described in the disclosure of the invention.

Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -

useful of

```
This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'.CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC genomic Sample of DNA. The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. CT fine amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two Classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders CC of the central nervous, cardiovascular, gastrointestinal and respiratory CS systems etc., particularly by detecting mutations or single nucleotide CC types and for investigating cell differentiation. The method allows the CC types and for investigating cell differentiation. The method allows the CC methylation status of many C residues to be determined simultaneously. CC MBOl3410-ABOS4121 represent genomic DNA sequences used to illustrate the CC method for determining the degree of cytosine methylation described in CC the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 994

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qγ
                                            The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neuroprotective; anti-HIV; anticonvulsant; ophthalmological; antirheumatic; antiarthritic; antidiabetic; antipsoriatic; antiinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease
